

## Abstract

The invention relates to the preparation of (meth)acrylate di-ammonium salts responding to formula (I)

(I)

5

wherein R<sup>1</sup> represents hydrogen or methyl, each R<sup>2</sup>, independently, represents an alkyl comprising from 1 to 4 carbon atoms, each R<sup>3</sup>, independently, represents an alkyl or an aralkyl and each X<sup>-</sup>, independently, represents an anion; having a high purity and their use as monomers for the synthesis of polymers useful as cationic flocculants.
